

SUNIKHIL THAKUR

Computer Science Graduate · AI, NLP & Software Engineering · Aspiring Researcher

thakursunikhil@gmail.com | +91 9882174438 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | Una, Himachal Pradesh, India

PROFILE

Computer Science graduate (CGPA 8.91/10, Chitkara University, 2025) with industry experience building AI-powered applications, NLP pipelines, and full-stack systems. My research interests span cross-lingual natural language processing, multilingual information retrieval, retrieval-augmented generation, and machine learning for time-series data. I am applying for a Master's degree in Japan to pursue advanced research in these areas under expert supervision, and to contribute work that is technically rigorous and practically meaningful.

EDUCATION

B.E. Computer Science Engineering

Aug 2021 – Aug 2025

Chitkara University, Punjab, India

CGPA: 8.91 / 10 · Relevant coursework: Data Science, Machine Learning, Data Structures & Algorithms, Software Engineering, Full-Stack Development

PROFESSIONAL EXPERIENCE

Software Engineer Intern

Jun 2024 – Aug 2024

Stalwart Integrals

- Developed full-stack web features for the Wokmat AI Assessment Platform — a client project — using React.js, Flask (Python), and MongoDB
- Built and delivered REST API endpoints for authentication, exam lifecycle management, and user data flow between frontend and backend systems
- Implemented secure authentication workflows using JWT and Google OAuth, including protected routes and session handling
- Designed a responsive admin dashboard for user management, exam creation, and system monitoring; developed proctoring features including webcam monitoring, fullscreen enforcement, and tab-switch detection
- Participated in Agile sprint cycles with code reviews and iterative feature delivery in a collaborative team environment

Technologies: React.js, Python, Flask, MongoDB, JavaScript, Tailwind CSS, JWT, Google OAuth, REST APIs

RESEARCH & AI/ML PROJECTS

MeetMind — AI Meeting Intelligence System

Mar 2026 – Apr 2026

NLP · Multi-Model Summarization · Topic Modeling · Sentiment Analysis

- Designed an end-to-end NLP pipeline transforming raw meeting audio or transcripts into structured intelligence, comparing three summarization paradigms: extractive (TextRank), abstractive local (BART-large-CNN), and LLM-based (GROQ API)
- Evaluated model outputs using ROUGE-1/2/L metrics; implemented LDA topic modeling with pyLDAvis visualization and RoBERTa-based sentiment analysis for tone-shift tracking over time
- Integrated OpenAI Whisper for multi-format audio transcription (MP3, MP4, WAV); built structured action item extraction via prompt engineering; deployed as a multi-tab Streamlit app with PDF export

Technologies: Python, OpenAI Whisper, HuggingFace Transformers (BART, RoBERTa), GROQ API, Scikit-learn, LDA, pyLDAvis, Streamlit, Plotly

Steervio — Autonomous Algorithmic Trading Platform

Jan 2026 – Present

Machine Learning · LLM Integration · Real-Time Systems

- Engineered a 7-layer autonomous trading pipeline combining market state detection (ADX/ATR), technical indicators, and a three-pronged AI consensus: rule-based signals (60%), ML predictor (20%), and LLM reasoning via GROQ/Llama-3.3-70b (20%)
- Implemented Kelly Criterion dynamic position sizing with a 2% risk-per-trade cap and daily loss failsafe; deployed real-time WebSocket telemetry streaming portfolio state and AI decision logs every 2 seconds

Technologies: *Python, Flask, React.js, MongoDB Atlas, Alpaca API, GROQ API, Socket.IO, Scikit-learn, Pandas, NumPy, yfinance*

Hands-Free Reading System — Eye-Controlled Interface

Apr 2026 – Jun 2026

Computer Vision · Accessibility · Human-Computer Interaction

- Built a real-time gaze-tracking system enabling hands-free text navigation via eye movements and blink detection — designed for users with physical disabilities in touchless environments
- Applied MediaPipe and Dlib for facial landmark detection and gaze-to-action mapping with minimal latency; built an intuitive UI for smooth reading experience

Technologies: *Python, OpenCV, MediaPipe, Dlib, NumPy, Tkinter/PyQt*

TECHNICAL SKILLS

AI / ML & NLP: Scikit-learn, HuggingFace Transformers (BART, RoBERTa), OpenAI Whisper, LLM APIs (GROQ, OpenAI), LDA, Computer Vision (OpenCV, MediaPipe), Pandas, NumPy

Languages: Python, JavaScript, TypeScript, Java, C++, SQL

Frontend: React.js, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, Flask, REST API design, Socket.IO

Databases: MongoDB, MySQL

Tools & Infra: Git/GitHub, Linux/Unix, VS Code, IntelliJ IDEA

Core CS: Data Structures & Algorithms (400+ problems on LeetCode/GFG), OOP, System Design, Agile
